

Resume / Candidate Screening System

Internship Task 3 Report

Objective: Build an ML-based system that screens resumes and ranks candidates against a job description.

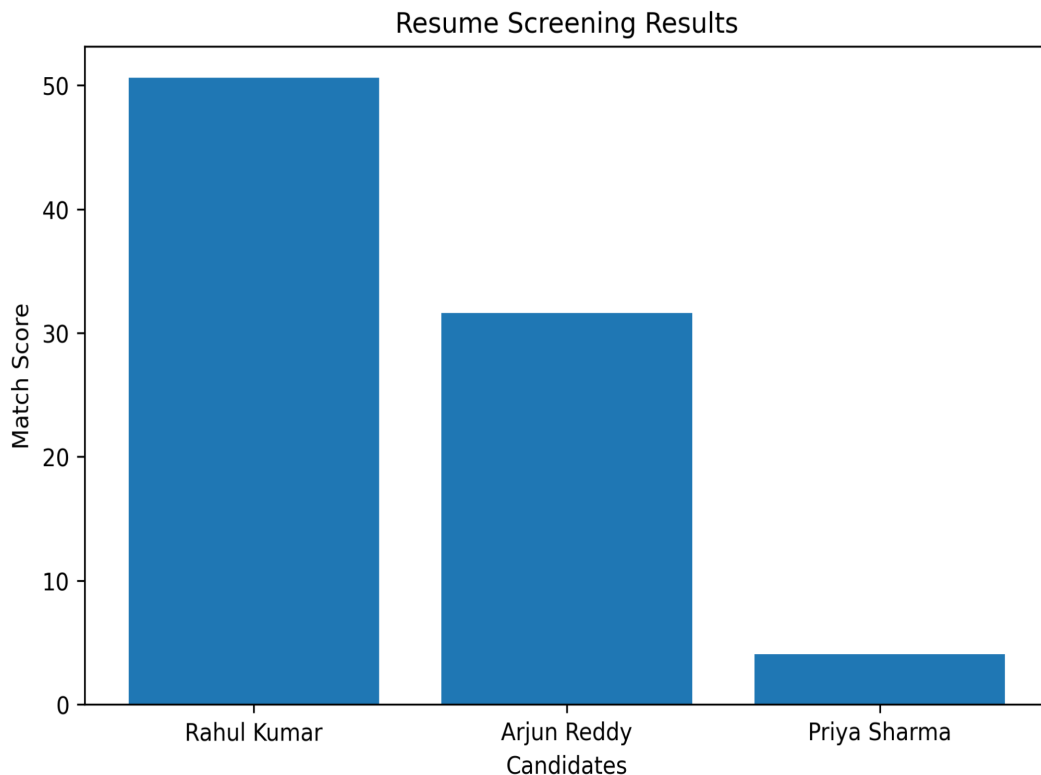

Technologies Used

Python, Scikit-Learn, TF-IDF Vectorizer, Cosine Similarity, PyPDF2, Google Colab, GitHub

Methodology

1. Upload resumes in PDF format.
2. Extract text from resumes.
3. Compare resumes with the job description using TF-IDF and cosine similarity.
4. Rank candidates by match score.
5. Visualize results.

Results

Top Candidate: Rahul Kumar achieved the highest match score for the Python Developer role.
